ChromaDex Vitamin Reference Standards

What are Reference Standards?

ChromaDex Vitamin Standards are highly characterized chemical compounds that can be used as reference standards for analysis of dietary supplements and nutraceutical raw materials and finished products. The ChromaDex Primary(P) Reference Standards characterized for both identity and purity by:

- NMR
- Mass Spectroscopy
- HPLC or GC for purity
- Water content by Karl fischer
- Residual solvent content by GC

ChromaDex Vitamin Reference Standards are used mainly in chromatographic and spectrophotometric procedures.

In addition to vitamin reference standards, ChromaDex provides high quality phytochemical products to analytical, clinical, pharmaceutical, and research laboratories.

Vitamin Certificates of Analysis

Detailed Certificates of Analysis(CofAs) are included with all ChromaDex Primary(P) Reference Standards Each Primary(P) reference standard CofA comes with all of the supporting data, including:

- NMR data image
- Mass Spec data image
- HPLC or GC chromatograms with method details
- Chromatographic purity with an adjusted purity accounting for residual water and solvent
- Expiration date
